

## SAFETY ALERT

Compatible mounting systems for Bobike Seats

## Bobike bicycle safety seats Mounting System Compatibility Chart

Bobike team has observed challenges among its customers in comprehending the mounting systems of each seat and determining when changes are permissible between different systems - for luggage or for frame.

To prevent accidents or inappropriate modifications to Bobike seats, we have created a set of charts categorized by range to facilitate the transmission of this information.

### Bobike One® Maxi

Unlike the Go range, the Bobike One Maxi seats allows you to buy spare parts and switch mounting systems as needed.

You can easily transform your original seat into a frame or carrier model with the right spare parts.

The Bobike One Maxi IP & E-BD version features the One System Fits All mounting system, providing all the necessary hardware for easy attachment of the seat on a rack or on a frame.

The Bobike One Maxi E-BD includes the EASY Mount System, only for carrier installation. If you need to mount this model on a frame, you can get the IP Mounting Set as a spare part, and connect it to the Easy Mount plate.

Both versions offer spare parts for effortless seat transfer between bikes without disassembling the hardware. The seat can be easily switched with no tools once the hardware is installed.

### Bobike One® Junior

The Bobike One Junior bicycle safety seat has a unique mounting system - to be installed on the carrier.

The One Junior cannot be converted to a Frame system. It's strictly prohibited for safety reasons to mount the One Junior Carrier on a Metal Mounting Bar.
